Profile

Third-year Software Engineering student at Manchester Metropolitan University, predicted First-Class Honours, with practical experience developing Java applications, full-stack web applications and API-integrated tools. Achieved 95% in Full-Stack Web Development, 92% in Advanced Programming and 85% in Software Design and Architecture. Experienced in Java, JavaScript, TypeScript, Python, SQL and REST APIs. A proactive and adaptable problem-solver with experience collaborating on technical projects, communicating with diverse teams and taking responsibility in fast-paced environments. Seeking graduate Software Engineering opportunities to contribute to reliable, maintainable software solutions while continuing to develop professionally.

Education

BSc (Hons) Software Engineering
Manchester Metropolitan University | 2024 - 2027
Selected Modules:

- **Full-Stack Web Development — 95%:** Developed full-stack applications integrating frontend interfaces, backend functionality and relational databases.
- **Advanced Programming — 92%:** Applied advanced programming concepts and structured problem-solving to software development.
- **Software Design and Architecture — 85%:** Studied software architecture, design principles and patterns for building maintainable applications.
- **Mathematics — 94%:** Developed analytical reasoning and mathematical problem-solving skills.

BTEC Level 3 Computing | D*D*D*

- **Student Ambassador for Computing:** Represented the Computing department and supported its student community.

Loreto Sixth Form College

9 GCSEs at Grade 4 to 9 including Maths and English
Our Lady's RC High School

Job History

Premium Suite Attendant
Co-op Live, Eastlands Venue | May 2025 - Present

- Prepare premium hospitality suites and tables, serve food and beverages, respond to guest requests and maintain clean service areas.**Chef De Rang**

Etihad Stadium, Eastlands Venue | October 2024 - Present

- Prepare tables and service areas and deliver food and beverage service during busy events.
- Coordinate orders, guest requests and table requirements while maintaining attention to detail.
- Work collaboratively with hospitality colleagues to deliver a positive guest experience under time pressure.
- Contribute to high-quality event service, including receiving positive feedback from guests.

Skills

- Java
- JavaScript
- TypeScript
- Python
- SQL
- HTML5
- CSS3
- Spring Boot
- Node.js
- Express.js
- Vue.js
- Next.js
- Tailwind CSS
- discord.js
- Git & Github
- Maven
- Postman
- SQLite
- REST APIs
- Object-oriented programming
- MVC & design patterns

TECHNICAL PROJECTS

Board Game Simulation | Java 21, Spring Boot, Maven | GitHub

- Developed a Java console game for 2–4 players with five gameplay variations and replay functionality.
- Applied Clean Architecture, dependency injection and Strategy, Observer and Decorator patterns to structure modular game logic.

Auctionary — Full-Stack Auction Platform | Vue.js, Node.js, Express.js, SQLite | GitHub

- Built a database-driven auction application featuring user accounts, listing creation, category browsing and bidding.
- Implemented server-side validation, account checks and salted password hashing across the full-stack application.

TechCord — Technology News Platform & Discord Bot | TypeScript, Next.js, Node.js, discord.js | Website | GitHub

- Contributed to a team-built news platform and Discord bot, integrating external APIs and normalising article data.
- Developed news discovery and content presentation features for the website and bot, collaborating with teammates on shared data structures.

Hobbies and Additional Information

Content Creation & Video Editing | Ongoing

- Independently create and edit gaming content using Adobe After Effects and CapCut. Manage content planning, recording, editing and publishing, building an audience of approximately 1,500 followers and producing a video that reached 298,000 views.

Student Advisory Board — Faculty of Science and Engineering, Manchester Metropolitan University | October 2026–Present

- Represent student perspectives in discussions about educational provision and the student experience, contributing to collaborative decision-making and student-focused improvements.

Hack Jr Hackathon | 2023

- Collaborated with a team to develop a Python-based finance trading project designed for students, contributing to a shared technical solution.

Girls Who Code | 2022

- Completed an online summer programme focused on developing programming knowledge and practical computing skills.
